
STEAMHAMLET™

A Transformative Situated Inquiry
by Bryan P. Sanders ©2016

—

Why don't we respond to the people in the room and co-construct the curriculum?

Reflection

I didn't expect to become part of the **problem** by doing what my principal told me to do, though I also didn't always know and trust that I had a **voice**.

**How can culturally
responsive computing
disrupt traditional K20
schooling?**

And the
literature says . . .

▪

drum roll

–
**Computers cannot
make good learning,
but students can
use computers to
make good learning.**

**Many people are interested
in disrupting the status quo
but don't know just how to
go about doing that.**

In order to conduct research I will have to actually show up in person and speak to teachers, administrators, and students.

I will also ask for permission to allow students to use my new software product as a pilot study. I will track and study their movements within the software, and also interview them afterwards.

–
**With pre- and post-
testing evidence, I
can see how my
data collection
connects to my
research question.**

**I learned a few things
about myself along the way**

20 years later and
all of these things
fit in your pocket.

When you tap your pockets
and you can't feel your phone

AND THEN I TOLD THEM

A photograph of a group of men in dark suits and ties, gathered around a table. They are all laughing and smiling, holding glasses of wine. The scene appears to be a formal or semi-formal social event. The man in the foreground is leaning forward, looking down at something in his hands, while the others look on with amusement.

**SOCIAL ENTREPRENEURSHIP CAN
CHANGE THE WORLD**

It's A Big Big Big Mess

You already know about how schools are flawed and the system is corrupt and that people you may not respect make decisions about policies and laws that govern what you do and say, so how about you just read this slide, pinch yourself, remember that you're alive, wonder if Bryan is going to mention this slide, or if it is part of some elaborate hoax, and then you just keep listening to him ramble on about something.

SCHOOL

TOMORROW

So what am I going to do... ?

Study the History

- Computer Science in Education
- Critical Theory in Education

Develop a Theory

- Transformation out of the status quo
- Construction instead of Instruction

Build a Prototype

- STEAMHAMLET will come to life!
- Science plus theory plus pedagogy

Pilot the Program

- Work with students
- Further develop program with their input

Many schools put on their website a desire to engage in the whole person and to include everyone while nurturing their individualized education.

LIP SERVICE!

**ONE DOES NOT
SIMPLY**

**INTEGRATE CRITICAL THEORY INTO THEIR
WRITING**

memegenerator.net

Looking ahead

My work focuses on intersections among possibilities with critical theory, open dialogue, cultural responsiveness, educational software, social justice work, and disrupting traditional K20 schooling :

→ **Mega Collaborate**

All knowledge from all oral and written histories/herstories and all time and space together

→ **Invent**

Purposefully engaging in problems and questions and imaginations

Ancient Egypt

Lots of information, though certainly written by the 'victors of history' and you had to actually go to Alexandria and be within the correct demographic to read any of the papyri.

Inspiration

A puzzle with an above average amount of challenge and a delicious amount of feedback -- ZORK is a great game on all accounts, but it is still a closed loop.

—
I am going to build an educational software product that looks into the impossible.

STEAM has
momentum **but**
where is HAMLET?

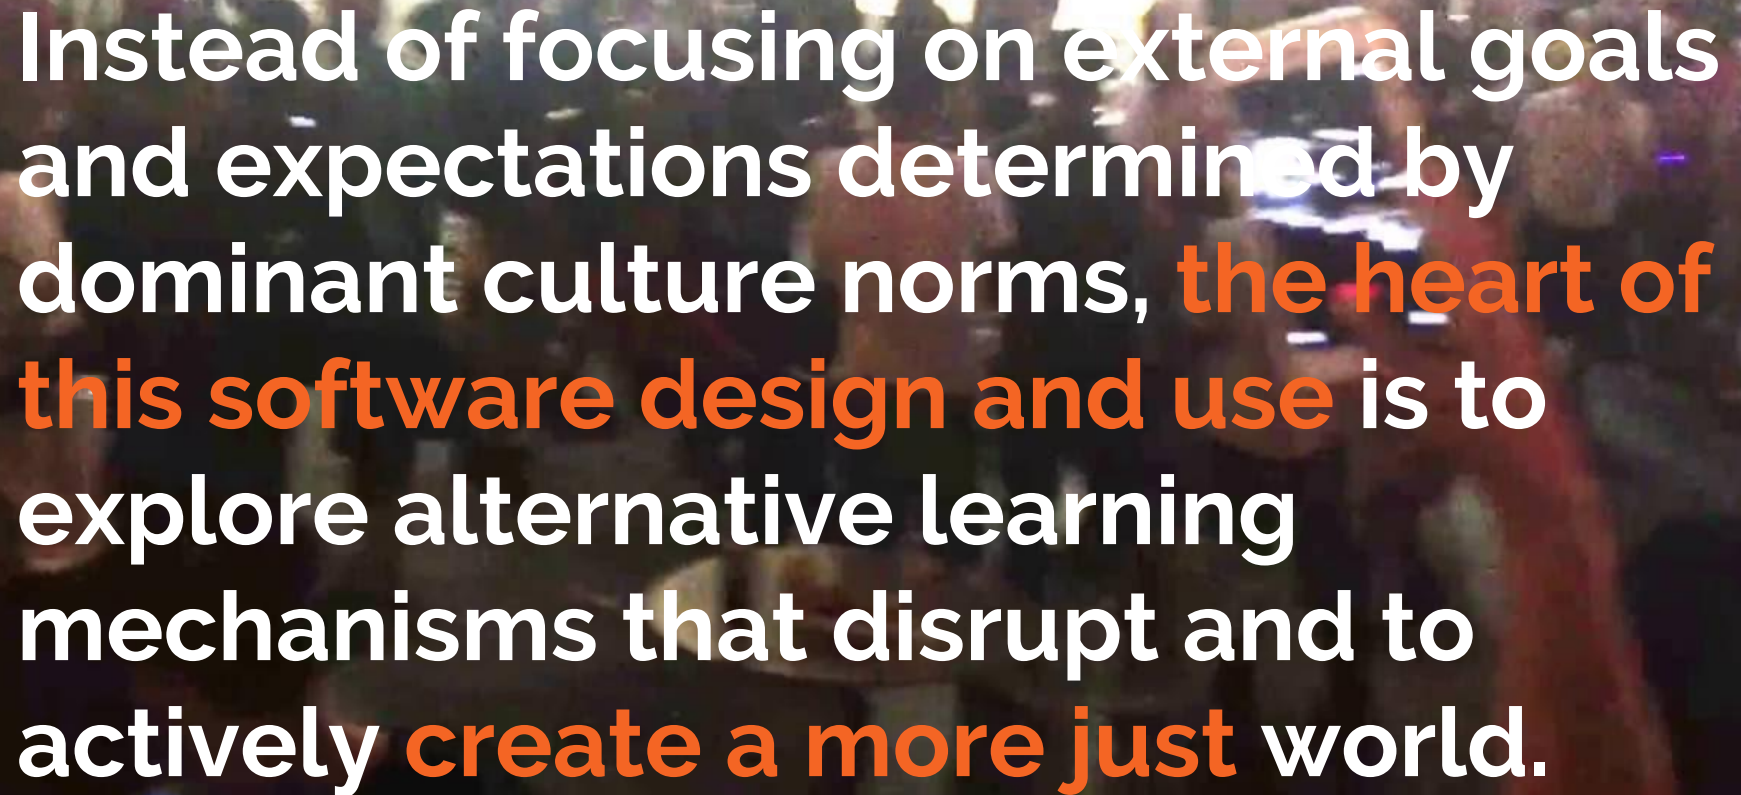

Dream Big

Microsoft's chatbot was a big next step and it taught us that we need to find ways to adapt to the user input without sacrificing the integrity of the project.

Science, **T**echnology,
Engineering, **A**rt,
Mathematics, **H**istory, **A**rt,
Music, **L**anguage, **E**nglish,
Theater = STEAMHAMLET.

Instead of focusing on external goals and expectations determined by dominant culture norms, **the heart of this software design and use** is to explore alternative learning mechanisms that disrupt and to actively **create a more just** world.
